Applied Numerical Mathematics 5 (1989) 541–542
North-Holland

AUTHOR INDEX TO VOLUME 5 (1989)

(The issue number is given in front of page numbers)

Arney, D.C. and **J.E. Flaherty,** An adaptive local mesh refinement method for time-dependent partial differential equations (4) 257–274
Augenbaum, J.M., An adaptive pseudospectral method for discontinuous problems (6) 459–480

Baiocchi, C. and **M. Crouzeix,** On the equivalence of A-stability and G-stability (1–2) 19– 22
Baker, T.J., Developments and trends in three-dimensional mesh generation (4) 275–304
Berzins, M., P.M. Dew and **R.M. Furzeland,** Developing software for time-dependent problems using the method of lines and differential-algebraic integrators (5) 375–397
Burrage, K. and **F.H. Chipman,** Efficiently implementable multivalue methods for solving stiff ordinary differential equations (1–2) 23– 40
Butcher, J.C. and **J.R. Cash,** Some recent developments on numerical initial value problems: A survey (1–2) 3– 18

Cahlon, B., Numerical methods of initial value problems (5) 399–407
Cash, J.R., see **J.C. Butcher** (1–2) 3– 18
Chen, W.H., see **Y.N. Tang** (6) 529–539
Chen, Y.M., see **Y.N. Tang** (6) 529–539
Chipman, F.H., see **K. Burrage** (1–2) 23– 40
Cloot, A. and **B.M. Herbst,** A model for the propagation of rounding error in a Klein–Gordon equation (6) 481–494
Conroy, J.M., Parallel algorithms for the solution of narrow banded systems (5) 409–421
Cooper, G.J., Error bounding functions for Runge–Kutta methods (1–2) 41– 50
Crouzeix, M., see **C. Baiocchi** (1–2) 19– 22

Dew, P.M., see **M. Berzins** (5) 375–397
Dutt, P. and **S. Ta'asan,** A spline-based parameter estimation technique for static models of elastic structures (3) 161–175

Flaherty, J.E., see **D.C. Arney** (4) 257–274
Frank, R., J. Schneid and **C.W. Ueberhuber,** B-convergence: A survey (1–2) 51– 61
Furzeland, R.M., see **M. Berzins** (5) 375–397

Giovangigli, V. and **M.D. Smooke,** Adaptive continuation algorithms with application to combustion problems (4) 305–331

Herbst, B.M., see **A. Cloot** (6) 481–494
Hundsdorfer, W.H. and **J.G. Verwer,** Linear stability of the hopscotch scheme (5) 423–433
Hussaini, M.Y., D.A. Kopriva and **A.T. Patera,** Spectral collocation methods (3) 177–208
Hyman, J.M. and **B. Larrouturou,** Dynamic rezone methods for partial differential equations in one space dimension (5) 435–450

Ioakimidis, N.I., On Kutt's Gaussian quadrature rule for finite-part integrals (3) 209–213
Iserles, A. and **S.P. Nørsett,** Order stars and rational approximants to $\exp(z)$ (1–2) 63– 70
Iskandar, L., New numerical solution of the Korteweg–de Vries equation (3) 215–221

Kaneko, H., A projection method for solving Fredholm integral equations of the second kind (4) 333–344
Katti, C.P., A new fourth-order finite difference method for a class of singular two-point boundary value problems (5) 451–457
Kopriva, D.A., see **M.Y. Hussaini** (3) 177–208
Kraaijevanger, J.F.B.M. and **M.N. Spijker,** Algebraic stability and error propagation in Runge–Kutta methods (1–2) 71– 87

Larrouturou, B., see **J.M. Hyman** (5) 435–450
Liniger, W., see **F. Odeh** (1–2) 89–103

Miel, G., Parallel solution of Fredholm integral equations of the second kind by orthogonal polynomial expansions (4) 345–361

Nevanlinna, O., see **F. Odeh** (1–2) 89–103
Nørsett, S.P., see **A. Iserles** (1–2) 63– 70

Odeh, F., O. Nevanlinna and **W. Liniger,** Multiplier and contractivity methods for linear multistep methods (1–2) 89–103

Parihar, K.S. and **M.P. Ramachandran,** On the numerical solution of Prandtl's integral equation (3) 223–235
Patera, A.T., see **M.Y. Hussaini** (3) 177–208

Ramachandran, M.P., see **K.S. Parihar** (3) 223–235
Rameau, J.F. and **C. Schmidt-Lainé**, Perturbed bifurcation phenomenon in a diffusion flame problem (3) 237–255

Salane, D.E., Improving the performance of a code for solving stiff systems of ODEs (4) 363–373
Sand, J., Choices in contractivity theory (1–2) 105–115
Sanz-Serna, J.M. and **J.G. Verwer**, Stability and convergence at the PDE/stiff ODE interface (1–2) 117–132
Scherer, R. and **H. Türke**, Algebraic characterization of A-stable Runge–Kutta methods (1–2) 133–144
Schmidt-Lainé, C., see **J.F. Rameau** (3) 237–255
Schneid, J., see **R. Frank** (1–2) 51– 61
Schwandt, H., Truncated interval arithmetic block cyclic reduction (6) 495–527
Skeel, R.D., The second-order backward differentiation formula is unconditionally zero-stable (1–2) 145–149
Skelboe, S., Stability properties of backward differentiation multirate formulas (1–2) 151–160
Smooke, M.D., see **V. Giovangigli** (4) 305–331
Spijker, M.N., see **J.F.B.M. Kraaijevanger** (1–2) 71– 87

Ta'asan, S., see **P. Dutt** (3) 161–175
Tang, Y.N., Y.M. Chen, W.H. Chen and **M.L. Wasserman**, Generalized pulse-spectrum technique for 2-D and 2-phase history matching (6) 529–539
Türke, H., see **R. Scherer** (1–2) 133–144

Ueberhuber, C.W., see **R. Frank** (1–2) 51– 61

Verwer, J.G., see **W.H. Hundsdorfer** (5) 423–433
Verwer, J.G., see **J.M. Sanz-Serna** (1–2) 117–132

Wasserman, M.L., see **Y.N. Tang** (6) 529–539
